NIMBUS

- ADVANCED CASE MANAGEMENT
- EXTERNAL SUBMISSION PORTAL
- ORCHESTRATION & AUTOMATION
- INVESTIGATIVE & ACTION MANAGEMENT
- QUALITY & LEARNING MANAGEMENT
- STAFF & ASSET MANAGEMENT

WHAT IS NIMBUS?

NIMBUS is the next generation Investigations Management System specifically designed for forensic, investigation and intelligence divisions. It is scalable from a small on-premise environment to a large enterprise level deployment operating in a cloud environment. NIMBUS modules are integrated making it easy for all stakeholders to work in a familiar setting to create and manage multiple investigations. NIMBUS' dynamic user experience and interaction is flexible and configurable, to build and shape to the current or future working practices of the organisation.

ALL FORENSICS DISCIPLINES

NIMBUS serves across all forensic science disciplines. The cross-discipline design and approach enables centralised workflows to be built and leveraged to deliver significant production efficiencies, greater collaboration and improved case transparency. By removing the siloed discipline approach NIMBUS delivers a radical reduction in the operating risk and unnecessary duplication of running multiple separate cases, workflows and LIMS systems.

CASE MANAGEMENT & SUBMISSION PORTAL

NIMBUS advanced case management provides access to distinct case phases for data ingestion, crime scenes, productivity, analysis, disclosure and reporting keeping a digital record for continuity. NIMBUS integrated portal capability allows evidence and requests to be submitted remotely via mobile, tablet or desktop from any location and user combination with the ability to receive status updates or indeed other relevant information required without incurring significant licencing costs.

ORCHESTRATION & AUTOMATION

NIMBUS' unique design is built on a highly flexible workflow engine, that is configurable to reflect and track compliance to standard operating procedures, guidance documents and/or training manuals. NIMBUS is designed for easy customisation for now and for the future, enabling NIMBUS to always be current, relevant and a primary driver of risk management and productivity improvements throughout the organisation. NIMBUS system architecture has an integration framework and API to seamlessly integrate, orchestrate and automate with any compatible technologies.

OUR MISSION IS TO REDUCE THE INVESTIGATION LIFECYCLE THROUGH INTELLIGENCE, EFFICIENCY AND INTEGRITY

BLACKRAINBOW

WHY USE NIMBUS?

- REAL TIME TRANSPARENCY
  Instant reporting and feedback of case status and granular controls for overseeing activities and tasks.

- OPERATIONAL RISK
  Orchestration module driving compliance, through the elimination of human error to maintain an accredited standard

- CONTROL & CONSISTENCY
  Establishing workflows that reflect SOPs ensuring all investigations are repeatable and defensible.

- SCALABLE COLLABORATIVE PLATFORM
  Modular construction provides ultimate flexibility for organisational growth, remote working and rapid enterprise search.

- COST SAVINGS
  Driving efficiency, reducing administration, giving back time to the investigator through the automation of tasks, significantly reducing human errors and delays.

INVESTIGATIVE & ACTION MANAGEMENT

NIMBUS investigation allows for all the case information to be brought together visually within a 'live' interactive graph, creation of a user driven canvas for links and identifying gaps and a timeline from incident start to assist with the management of cases. NIMBUS contains full action management including a 'live' dashboard to see actions move in real time as they are being worked on and visual action trees to show action routes and decision making along with timers and notifications.

QUALITY MANAGEMENT

NIMBUS has an integrated Quality Management capability for overseeing activities, tasks and document control required to maintain an accredited standard and, to effectively manage risk, whilst significantly improving efficiency. NIMBUS delivers a reliable, robust and defensible system, by ensuring people are appropriately trained and competent, assets are validated or verified, and procedures are followed, all within an auditable environment.

ABOUT US

BlackRainbow are experts in technologies, workflows, protocols and processes across the fields of investigation and intelligence. We have worked as, and with, Investigators in over forty countries over the past two decades to understand their challenges and develop solutions to meet their needs.

At BlackRainbow we understand that no two forensic, analytical and investigative environments are the same. We will work with your teams to maximize your analytical and investigative environment as well as enabling any wider user group(s) to interact with the system in a seamless but secure manner.
